**The Earth's Swift Motion.**  
Everybody knows that the earth makes one complete revolution on its axis once in each twenty-four hours, but few, however, have any idea of the high rate of speed at which such an immense ball must turn in order to accomplish the feat of making one revolution in a day and a night. A graphic idea of the terrific pace which the old earth keeps up year after year may be had by comparing its speed to that of a cannon ball fired from a modern high pressure gun. The highest velocity ever attained by such a missile has been estimated at 1,626 feet per second, which is equal to a mile in 3.2-10 seconds. The earth in making one complete revolution in the short space of twenty-four hours must turn with a velocity almost exactly equal to that of the cannon ball. In short, its rate of speed at the equator is exactly 1,507 feet per second. This is equal to 17 miles a minute.
